PROFESSIONAL SUMMARY

Final-year Computer Science and Engineering specialization in Data Science student with hands-on experience in backend development, AI-based systems, and embedded projects. Built real-world applications including a language-agnostic chatbot with secure JWT authentication, an IoT-based human-following robot, and a Raspberry Pi-powered placement website. Strong foundation in Python, Java, REST APIs, and PostgreSQL. Seeking opportunities in Backend Development, Data Analysis and Data Science

TECHNICAL SKILLS

- Programming: Python, Java, SQL
- Backend: FastAPI, REST APIs, JWT Authentication
- Database: PostgreSQL
- Embedded & IoT: Arduino, Raspberry Pi
- Tools: Git, Postman, VS Code
- Core Concepts: OOP, DBMS, Data Structures, Operating Systems

PROJECTS

1. Language Agnostic Chatbot (FastAPI + PostgreSQL)
 - Developed secure backend APIs using FastAPI. Implemented JWT-based authentication. Stored chat logs including user ID, question, response, timestamp, and language in PostgreSQL. Tested endpoints using Postman.
2. Ask Your Vet – Veterinary Consultation Platform
 - Built backend logic for handling pet consultation queries. Structured database for storing user and consultation records. Focused on accessible veterinary assistance.
3. Human Following Robot (Arduino-Based)
 - Designed a robot using Arduino and ultrasonic sensors for real-time distance detection and tracking. Integrated motor drivers for automated movement control.
4. Placement Website using Raspberry Pi
 - Developed and hosted a lightweight placement portal on Raspberry Pi. Enabled student registration and job listings. Optimized for low-resource hardware.

EDUCATION

B.Tech– Computer Science and Engineering (Data Science) – Presidency University , Bangalore

8th Semester

CGPA: 6.88

CERTIFICATIONS

- NPTEL Certification (College Authorized)
